The new Canyon portable wireless speaker is ready to blast your all-time favorites. Rated at 10 Watts, it is a travel-sized powerhouse. Rounded shapes, compact size, and a neat little handle make it a perfect companion for a trip or a countryside party with your friends! The RGB backlight on top will look awesome after dark, and you can easily find the playback control buttons there. Enjoy up to 3 hours of music while being connected with Bluetooth, and once the battery dies - just plug it in with about any Type-C cable. Besides, you can use AUX, USB, or a MicroSD memory card as your media source.

We truly recommend using Bluetooth – what's better than switching playlists on the fly? As far as 10 meters from the speaker, the connection remains stable. Get your BSP-8 speaker in red, gray, or black – your adventures need to get a soundtrack.
