Meet the Shift MCCH01 Mesh/Fabric Transformer Chair – one that does more than just adjust to you. Climbing the ranks in a game, leading a big meeting, or being productive? This chair makes any task feel comfortable. It's called the Transformer Chair because it's made of breathable mesh but also comes with a fabric cover, allowing you to use it with or without the cover, adapting to your needs. With its adjustable backrest angle from 90° to a full 180°, you can sit up for business or recline like a pro. Versatility matters, and this chair does it well.

Comfort stays at the core with original foam that's supportive yet snug. Wrapped in high-quality mesh and fabric, the chair stays breathable and soft while delivering great lumbar support. Built on a strong metal frame, the Shift MCCH01 is the definition of durability. The 5-star metal base and 60 mm quiet casters let you glide smoothly from task to task without disturbing the peace (or the pet napping under your desk, if that's the case).

Adjusting your chair shouldn't be a struggle, and the Butterfly Mechanism makes transitioning from a strict 90° to a laid-back 180° easy. What's more, the Class-4 gas lift raises or lowers you with the confidence of a hydraulic lift on a luxury car. The headrest and lumbar pillows top off the experience. Adjustable and comfy, they're more than capable of keeping your neck and lower back happy.

DURABLE METAL FRAME

Built to handle the pressure, the metal frame provides unyielding support during intense gaming matches or marathon work sessions. This frame doesn't flinch; it's a solid foundation that stands the test of time and any chair twirls you can imagine.

ERGONOMIC DESIGN

Your body will thank you for choosing a chair that aligns with its natural curves. The ergonomic design is tailored to hug your posture and help you maintain comfort while reducing strain. The high-quality mesh fabric is breathable, allowing air to circulate so you can focus on your game without overheating.

COMFORTABLE SEAT

With original cold-molded foam that props you up without collapsing, this chair won't flatten out over time. It's quite literally a supportive cloud that provides a break from sitting on hard, unyielding surfaces.

STABLE

Stability comes from the combination of a durable metal frame and a 5-star metal base, which protects you from sudden shifts or spontaneous dance breaks and tipping over. Rest assured: you can lean back and trust your seat.

A close-up, low-angle shot of a black gas lift cylinder, likely for a chair or desk. The cylinder has a textured, ribbed upper section and a smoother lower section with a circular base. It is surrounded by green and black mechanical components, possibly part of a chair's base or a desk's adjustment mechanism. The background is dark and out of focus.

POWERFUL CLASS-4 GAS-LIFT

The Class-4 gas lift is behind the adjustable superpowers. It's built to handle weight effortlessly and delivers a steady, gentle adjustment whenever needed. You'll rise and descend in a breeze.

HIGH QUALITY MESH AND FABRIC

The high-quality breathable mesh will keep you cool even during intense gaming battles or back-to-back meetings. And for those who want the best of both worlds, there's a fabric cover included, which is ideal for switching things up when you feel like it.

CANYON
GAMING

The image shows three racing seats, likely for a kart or small car, arranged in a row to demonstrate their adjustable backrest feature. The seats are black with white piping along the edges. The first seat on the left is reclined at a steep angle, the middle seat is at a moderate angle, and the third seat on the right is upright. The background is a dark, textured surface with a repeating pattern of small, light-colored dots.

ADJUSTABLE BACKREST

From full-focus at a 90° angle to chill-out mode at a 180°, the backrest adjusts to your needs right away. Your back will appreciate the customizable comfort that enables both quick stretches and full reclines.

BUTTERFLY MECHANISM

The butterfly mechanism makes transitioning from intense work to laid-back leisure effortless. The chair adapts to your posture with ease, so the slight tilts and shifts will feel natural.
